HEAT PUMP PRODUCTS**

BROAN® HIGH-EFFICIENCY

FIXED-SPEED SMALL PACKAGED, 1.5 - 5 TONS

13.4 SEER2 AIR CONDITIONERS

13.4 SEER2/6.7 HSPF2 HEAT PUMPS

Leave it to Broan to make your life just a little more livable. Broan's series of packaged air conditioners and heat pumps work seamlessly and efficiently to increase your comfort at home. These units are designed to be quiet and energy efficient while providing relief and dependability. For your peace of mind, each Broan unit comes with the 10-year limited parts warranty when product is registered, one of the most comprehensive warranties available.

Unlike most heating and cooling systems, which are divided into outdoor and indoor sections, a "packaged" system includes all the components necessary to heat and/or cool your home in one, convenient unit.

The fixed-speed ECM direct-drive motor provides higher torque and operating speeds for improved airflow capacity.

Broan's 13.4 SEER2 packaged air conditioners provide electric heating and cooling. Depending on the climate you live in, a heat pump may be ideal for your family. Heat pumps work similarly to a conventional air conditioner with one big exception: They also provide heat in the winter. You can save 30% to 60% on energy usage during the winter months by switching to a heat pump. During warmer months, heat pumps collect heat

from the air in your home and move it to the outside. In winter, the process reverses, and the heat pump collects heat from air outside to warm the air inside your home.

Supplemental heater kits can also be installed with Broan 13.4 SEER2 packaged air conditioners to heat the home. Your Broan contractor can recommend the appropriate packaged product for your home.

SEER2 AND HSPF2 EFFICIENCY RATINGS

Your air conditioner's and heat pump's efficiency are measured by Seasonal Energy Efficiency Ratio 2 (SEER2). SEER2 is the new Department of Energy efficiency standard. SEER is the standard measure of efficiency for central air conditioning systems. The higher the SEER, less electricity is required for a air conditioner unit to do its job. Heat pumps are also rated by Heating Seasonal Performance Factor 2 (HSPF2). The main difference between SEER/HSPF and SEER2/HSPF2 is the testing conditions for each rating system. The SEER2/HSPF2 testing conditions are meant to give consumers a clearer, more accurate idea of a unit's efficiency.

ENERGY EFFICIENCY

Broan packaged systems provide high-efficiency, less energy consumption and lower utility bills. You can be sure in the total comfort of your home that Broan packaged systems will save you more.

ADVANCED TECHNOLOGY

All Broan packaged systems feature enhanced all-aluminum evaporator and condenser coils. These coils reduce unit weight and require less refrigerant than traditional coils. Heat pump models have a patented hot gas defrost for worry-free operation.

DURABILITY AND STYLE

All Broan packaged air conditioners and heat pumps are built using proven, reliable parts. Each part is examined carefully with our rigorous quality check process.

QUIET COMFORT

The high-efficiency condenser motor and fan blades provide quiet operation and low vibration.

Your packaged system is only one part of the comfort system that affects your air quality and energy savings. Broan offers a complete line of system components to improve indoor air quality and help ensure the performance of your comfort system.

PEACE OF MIND

Broan packaged products offer a 10-year limited warranty on parts when registered. Plus, our Quality Pledge states that your entire unit will be replaced if the compressor fails within the first 10 years of purchase, registration required.

Ask your Broan heating and cooling contractor or visit us at www.broanhvac.net for warranty details.

Product registration required.

DEMAND FLOW TECHNOLOGY

The more you learn about our manufacturing process, the more you'll see why no other heating and cooling manufacturer compares to Broan's product quality — quality made possible through Demand Flow Technology. While other companies test products at random, we use 100% computer-automated testing on every Broan product to eliminate human error in the final analysis of product quality. We are the only heating and cooling manufacturer to be DFT certified.

ENERGY DEFINITIONS

SEER2 – Seasonal Energy Efficiency Ratio 2

Measures cooling performance on air conditioners, heat pumps and gas/electric packaged products.

HSPF2 – Heating Seasonal Performance Factor 2

It is a measure of the average number of BTU of heat delivered for every watt-hour of electricity used by the heat pump over the heating season.

As ratings increase, so does unit efficiency.
